

## Investment Monthly

### Within EM equities, Asia remains a positive story

#### Key takeaways

- ◆ We have downgraded emerging market (EM) equities from overweight to neutral. But we remain overweight on Asia ex- Japan equities and local-currency EM government bonds. We also remain overweight on global equities, and underweight on developed market (DM) government bonds
- ◆ Global equity markets edged up in September, with investors broadly shrugging off an escalation in trade tensions between the US and China
- ◆ The Fed raised interest rates by 25bp in September, with monetary policy no longer described as "accommodative"
- ◆ Eurozone and UK GDP growth are holding up well, both expanding by 0.4% qoq in Q2, but downside risks remain
- ◆ In China, policy easing is now focussing on local government infrastructure spending, tax and tariff cuts and initiatives to stimulate consumption
- ◆ Japan's economic activity remains supported by a robust labour market and rising wage growth, whilst investment is being supported by limited spare capacity
- ◆ Our latest Nowcast shows a stabilisation in underlying economic activity in EM economies

#### EM Asian equities appear more attractive than other EM regions

There has been a clear loss of economic growth momentum in EM countries this year. However, the deterioration has not been uniform across the EM space. Consequently, we now prefer to fulfil our EM equity exposure in Asia, where economic growth has been comparatively robust (compared to Latin America for example) and structural characteristics are better. This preference for Asian equities means we retain our overweight stance on **Asia ex-Japan equities**, but downgrade our overall **EM equity** view to neutral. We still prefer taking EM risk through **local currency government bonds** where prospective risk-adjusted returns are higher than EM equities overall. We remain overweight in this segment, but being selective remains important.

This commentary has been produced by HSBC Global Asset Management to provide a high level overview of the recent economic and financial market environment, and is for information purposes only. The views expressed were held at the time of preparation; are subject to change without notice and may not reflect the views expressed in other HSBC Group communications or strategies. This marketing communication does not constitute investment advice or a recommendation to any reader of this content to buy or sell investments nor should it be regarded as investment research. The content has not been prepared in accordance with legal requirements designed to promote the independence of investment research and is not subject to any prohibition on dealing ahead of its dissemination. You should be aware that the value of any investment can go down as well as up and investors may not get back the amount originally invested. Furthermore, any investments in emerging markets are by their nature higher risk and potentially more volatile than those inherent in established markets. Any performance information shown refers to the past and should not be seen as an indication of future returns. You should always consider seeking professional advice when thinking about undertaking any form of investment.

Elsewhere, our views are unchanged this month. The current macroeconomic backdrop remains supportive for risk assets and the corporate sector continues to be robust. Based on current valuations, **global equities** remain the best way to benefit from this environment, in our view. We also remain neutral on **corporate bonds**,

with valuations having improved year-to-date. Finally, we believe **DM government bonds** continue to offer low sustainable returns, although shorter-dated **US Treasuries** appear relatively attractive and can be a source of diversification.

## Long-term asset class positioning (>12 months)

### Basis of Views and Definitions of 'Long term Asset class positioning' tables

Views are based on regional HSBC Global Asset Management Asset Allocation meetings held throughout September 2018, HSBC Global Asset Management's long-term expected return forecasts which were generated as at 31 August 2018, our portfolio optimisation process and actual portfolio positions.

**Icons:** ↑ View on this asset class has been upgraded – No change ↓ View on this asset class has been downgraded

Underweight, overweight and neutral classifications are the high-level asset allocations tilts applied in diversified, typically multi-asset portfolios, which reflect a combination of our long-term valuation signals, our shorter-term cyclical views and actual positioning in portfolios. The views are expressed with reference to global portfolios. However, individual portfolio positions may vary according to mandate, benchmark, risk profile and the availability and riskiness of individual asset classes in different regions.

**"Overweight"** implies that, within the context of a well-diversified typically multi-asset portfolio, and relative to relevant internal or external benchmarks, HSBC Global Asset Management has (or would have) a positive tilt towards the asset class.

**"Underweight"** implies that, within the context of a well-diversified typically multi-asset portfolio, and relative to relevant internal or external benchmarks, HSBC Global Asset Management has (or would) have a negative tilt towards the asset class.

Source: HSBC Global Asset Management. All numbers rounded to one decimal place  
Past performance is not an indication of future returns.

“**Neutral**” implies that, within the context of a well-diversified typically multi-asset portfolio, and relative to relevant internal or external benchmarks HSBC Global Asset Management has (or would have) neither a particularly negative or positive tilt towards the asset class.

For global investment-grade corporate bonds, the underweight, overweight and neutral categories for the asset class at the aggregate level are also based on high-level asset allocation considerations applied in diversified, typically multi-asset portfolios. However, USD investment-grade corporate bonds, EUR and GBP, and Asia investment-grade corporate bonds are determined relative to the global investment-grade corporate bond universe.

## Equities

Asset class	View	Movement	Rationale
Global	Overweight	—	<p><b>Rationale of overweight views:</b> Our measure of the global equity risk premium (excess return over cash) is still reasonable given where we are in the profits cycle. We believe global equities still offer attractive rewards amid the risks to the growth outlook, whilst corporate fundamentals remain strong. Overall, support from still-loose monetary policy and fiscal policy (if needed) will, in the medium and longer term, likely outweigh any headwinds from more modest Chinese growth, monetary policy normalisation in DM economies, and political uncertainty in many regions.</p> <p><b>Risks to consider:</b> Fairly narrow implied equity risk premiums could limit the ability of the market to absorb bad news. Episodic volatility may be triggered by concerns surrounding global trade protectionism, Chinese growth, and/or a potentially more rapid than expected US Federal Reserve, European Central Bank or Bank of Japan normalisation of policy, coupled with political risks. A notable and persistent deterioration of the global economic outlook could also dampen our view. Finally, rising wage growth in many DM economies may undermine corporate profits.</p>
US	Neutral	—	<p><b>Positive factors:</b> Corporate fundamentals remain strong, the earnings growth outlook appears solid in our opinion (with upside risks from tax reform), and the US macroeconomic backdrop looks still robust. Overall, our measure of the implied risk premium (excess returns over cash) remains consistent with a neutral positioning.</p> <p><b>Risks to consider:</b> Further Fed policy tightening poses risks, especially as the US economic cycle matures. We are getting closer to the critical point where we need to reassess whether we are being offered enough return to take on equity risk in this market. Risks from US protectionism also need to be considered, especially if further rounds of tit-for-tat actions towards China materialise.</p>
UK	Neutral	—	<p><b>Positive factors:</b> Major UK equity indices are heavily weighted to financial and resource stocks which should benefit from higher commodity prices and rising interest rates. Overall, however, current valuations are consistent with a neutral positioning, in our view.</p> <p><b>Risks to consider:</b> The prospective reward for bearing equity risk in the UK is relatively low compared to other markets. Brexit-related uncertainty is weighing on UK economic performance.</p>
Eurozone	Overweight	—	<p><b>Rationale of overweight views:</b> Eurozone equities benefit from relatively high implied risk premiums and scope for better earnings news, given the region’s earlier point in the activity cycle. Ultra-low ECB policy interest rates are likely to persist until the end of the decade. Economic activity indicators, including our Nowcast, have stabilised following a moderation earlier this year.</p> <p><b>Risks to consider:</b> Export growth is vulnerable to the weaker global environment, protectionism risks and the lagged impact of euro strength. Political risks may be posed by the populist government in Italy and Brexit negotiations.</p>
Japan	Overweight	—	<p><b>Rationale of overweight views:</b> The relative valuation is attractive, in our view, whilst policy is supportive. Large corporate cash reserves provide firms with the scope to boost dividends or engage in stock repurchases. The trend in earnings growth remains positive.</p> <p><b>Risks to consider:</b> Although there has been a pick-up in investment, a moderation in world trade growth will weigh on GDP growth this year. Other headwinds include a consumption tax increase planned for October 2019. Protectionism is a key risk.</p>

Sources: Bloomberg, HSBC Global Asset Management. Data as at close of business 28 September 2018.

Past performance is not an indication of future returns.

Asset class	View	Movement	Rationale
Emerging Markets (EM)	Neutral		<p><b>Rationale of view change:</b> We prefer to fulfil our EM equity exposure in Asia where economic growth has been relatively robust (compared to Latin America for example) and macroeconomic structural characteristics are better.</p> <p><b>Positive factors:</b> We think valuations offer a decent margin of safety, and there is still significant potential for (selected) EM currencies to appreciate over the medium term. The structural characteristics of EM economies are significantly better than in the past, whilst recent policy easing in China should help support EM economic activity in the short-term. Meanwhile, the risk of a further spike in the USD is being limited by a very gradual Fed tightening path.</p> <p><b>Risks to consider:</b> EM growth momentum has weakened this year, with US-China trade tensions and the potential for further US dollar strength still undermining the growth outlook. Aggregate EM inflation has also edged up on the back of currency exchange rate weakness, limiting the scope for central banks to ease policy. Furthermore, although Chinese authorities have eased policy, it remains to be seen if this will provide enough support.</p>
Asia ex Japan	Overweight	—	<p><b>Rationale of overweight views:</b> We think Asia ex-Japan equities have attractive risk-adjusted returns. Asian economic growth has held up relatively well, earnings growth is strong and macroeconomic structural characteristics are better than in other EM regions. We think Asian currencies are also poised to appreciate in the medium term.</p> <p><b>Risks to consider:</b> A further rise in US Treasury yields is a key risk, along with DM central bank policy normalisation. Other risks include US protectionist policies; geopolitical events; commodity-price and/or currency volatility; faltering global growth; and renewed concerns about China's growth and financial stability.</p>
CEE & Latam	Neutral	—	<p><b>Positive factors:</b> There has been a loss of economic growth momentum in Brazil and Mexico in 2018, although activity remains fairly resilient, with Brazil's GDP growth still well above rates prevailing over 2015-6. Meanwhile, in CEE, we believe Poland, Russia and Hungary offer attractive equity risk premiums.</p> <p><b>Risks to consider:</b> Economic growth could deteriorate further. Geopolitical tensions are high and unpredictable. We think high local cash rates and sovereign yields in many countries diminish the case for bearing equity risk.</p>

## Government bonds

Asset class	View	Movement	Rationale
Developed Markets (DM)	Underweight	—	<p><b>Rationale of underweight views:</b> Prospective returns still look low relative to competing asset classes. In a bond-unfriendly environment (robust global activity, the risk of cyclical inflationary pressures, and gradual DM central bank policy normalisation), global bond yields could move higher still.</p> <p><b>Positive factors:</b> Government bonds can still offer diversification benefits should there be a renewal of economic growth concerns. Also, "secular stagnation" forces remain (ageing populations, low productivity and investment), and the global pool of safety assets is limited.</p>
US	Underweight	—	<p><b>Rationale of underweight views:</b> The US is at the forefront of building inflationary pressures. A more meaningful pick-up in inflation is a key risk scenario.</p> <p><b>Positive factors:</b> Two-year Treasury yields are above US dividend yields. To us, this means we no longer need to be exposed to unwanted risks in order to reach target income levels. We also believe 10-year Treasuries can benefit from recession fears. This is set against a backdrop of "price stability". We hold this position with a positive bias (i.e. close to neutral).</p>
UK	Underweight	—	<p><b>Rationale of underweight views:</b> Prospective returns for UK gilts continue to look poor, and we are being penalised for bearing interest-rate risk.</p> <p><b>Positive factors:</b> Although the BoE has signalled a gradual tightening path, amid downside risks to growth and core inflation heading back toward target, monetary policy is likely to remain relatively accommodative.</p>

Sources: Bloomberg, HSBC Global Asset Management. Data as at close of business 28 September 2018. Past performance is not an indication of future returns.

Asset class	View	Movement	Rationale
Eurozone	Underweight	—	<p><b>Rationale of underweight views:</b> Similarly, core European bonds are overvalued, in our view. A key risk is the termination of the ECB Asset Purchase Programme this year.</p> <p><b>Positive factors:</b> Core inflationary pressures in the region remain subdued, which should keep accommodative monetary policy in place for an extended period of time.</p>
Japan	Underweight	—	<p><b>Rationale of underweight views:</b> Japanese government bonds (JGBs) are overvalued, in our view. The BoJ has also recently reduced the amount of its JGB purchases and has started to modify its yield targeting framework.</p> <p><b>Positive factors:</b> The “Yield Curve Control” framework should limit volatility and reduce the risk of significantly higher yields in the near term.</p>
<b>Emerging markets (EM)</b>	<b>Overweight</b>	—	<p><b>Rationale of overweight views:</b> In our view, most countries offer high prospective returns, especially relative to the opportunity set. Our estimate of the sustainable return on EM currencies reinforces our choice to hold this position unhedged.</p> <p><b>Risks to consider:</b> A more aggressive than expected tightening of Fed policy and a rapid gain in the US dollar are key risks. Diverging economic and political regimes in the EM universe also mean that being selective is key.</p>

## Corporate bonds

Asset class	View	Movement	Rationale
<b>Global investment grade (IG)</b>	<b>Neutral</b>	—	<p><b>Positive factors:</b> Prospective returns on IG corporate bonds have improved this year. The macro environment remains supportive for credits – implied recession probabilities remain very low. The risk of defaults and downgrades appears limited for now.</p> <p><b>Risks to consider:</b> Although credit premiums have risen, the margin of safety against negative shocks, such as a deterioration in the data or default outlook, is not large. We still believe we can access growth at a better price through equity exposures.</p>
USD investment grade	Neutral	—	<p><b>Positive factors:</b> Prospective returns on US IG corporate bonds have improved this year. US IG debt looks more attractive to us than European credit. We think carefully-selected US credit may outperform.</p> <p><b>Risks to consider:</b> The “duration” of US IG corporate bonds — a measure of their sensitivity to shifts in underlying interest rates — is historically high, making them vulnerable to a faster pace of Fed tightening, in our view.</p>
EUR and GBP investment grade	Underweight	—	<p><b>Rationale of underweight views:</b> EUR IG prospective returns are weighed down by a negative duration risk premium i.e. we are being penalised for bearing interest-rate risk.</p> <p><b>Positive factors:</b> For the time being, the ECB’s corporate bond-buying programme and pledge to reinvest maturing assets for “an extended period of time” remains supportive. Default rates also remain low.</p>
Asia IG	Neutral	—	<p><b>Positive factors:</b> Within the IG universe, the carry offered by Asian credits looks attractive relative to DM. Our measure of the implied credit risk premium is also relatively high. Robust underlying activity in EM Asia and a neutral monetary policy stance in most countries are also supportive.</p> <p><b>Risks to consider:</b> A more aggressive than expected Fed policy normalisation poses a key risk, particularly for corporates who borrow in US dollars. Risks from rising protectionism cannot be ignored either, while the extent of Chinese leverage remains a long-term issue.</p>
<b>Global high-yield (HY)</b>	<b>Neutral</b>	—	<p><b>Positive factors:</b> Prospective returns on HY corporate bonds have improved this year. HY bonds are more exposed to growth than to interest rate risk. Corporate fundamentals are solid amid robust global economic activity, and defaults are low. We prefer higher-rated HY bonds.</p> <p><b>Risks to consider:</b> Our measures show that we remain better rewarded by equities as a way to benefit from a strong economic backdrop.</p>

Sources: Bloomberg, HSBC Global Asset Management. Data as at close of business 28 September 2018.

Past performance is not an indication of future returns.

Asset class	View	Movement	Rationale
US HY	Neutral	—	<p><b>Positive factors:</b> Prospective returns on US HY corporate bonds have improved this year. Broad-based strength in US economic activity continues to support corporate fundamentals. Tax reforms will also help. Default rates are relatively low. HY bonds also have a shorter effective duration, making them more exposed to growth than to interest rate risk.</p> <p><b>Risks to consider:</b> US HY credits remain vulnerable to a deterioration in economic data or the default outlook. A more aggressive than expected Fed tightening cycle is a key risk.</p>
Europe HY	Underweight	—	<p><b>Rationale of underweight views:</b> The carry offered by Euro HY is unattractive compared to European equities. The ECB's Asset Purchase Programme (APP), which has so far been positive for this asset class, will be terminated by the end of this year. Overall, our measure of prospective risk-adjusted returns in EUR HY is consistent with an underweight positioning.</p> <p><b>Positive factors:</b> The robust eurozone recovery, coupled with spill-over effects from the ECB APP remain supportive. The default outlook also looks benign.</p>
Asia HY	Neutral	—	<p><b>Positive factors:</b> The carry offered by Asian High Yield looks attractive to us given the alternatives, with relatively high prospective risk-adjusted returns. Economic momentum is robust and inflationary pressures appear relatively stable.</p> <p><b>Risks to consider:</b> A faster pace of Fed monetary policy normalisation poses a key risk, particularly for corporates who borrow in US dollars. Risks from rising protectionism cannot be ignored either, while the extent of Chinese leverage remains a long-term issue.</p>

## Other

Asset class	View	Movement	Rationale
EM agg bond (USD)	Neutral	—	<p><b>Positive factors:</b> Prospective returns on EM hard-currency bonds have improved this year. Investors' reach for yield may continue to support this asset class.</p> <p><b>Risks to consider:</b> The risk of a more hawkish Fed and stronger USD poses a significant risk to USD-denominated debt holdings in the EM universe. USD debt leverage is high in some economies.</p>
Gold	Neutral	—	<p><b>Positive factors:</b> Gold futures can offer reasonable diversification benefits to our multi-asset portfolios and have some inflation-hedging characteristics.</p> <p><b>Risks to consider:</b> Based on our expected returns framework, prospective returns on gold futures look poor at present given current market pricing. This is due to the large negative expected roll yield (the cost of renewing futures contracts) and a negative expected spot price return.</p>
Other commodities	Neutral	—	<p><b>Positive factors:</b> Commodity futures can offer reasonable diversification benefits to our multi-asset portfolios and have some inflation-hedging characteristics.</p> <p><b>Risks to consider:</b> Based on our expected returns framework, prospective returns on commodity futures look poor today given current market pricing. This is primarily because there is a large negative expected roll yield (the cost of renewing futures contracts).</p>
Real estate	Neutral	—	<p><b>Positive factors:</b> At the end of August 2018, global real estate equities offered a dividend yield of 3.9%, 154 basis points above that of wider equities, which is attractive in a low interest rate environment. In the long run, rents are linked to wider economic growth and offer a partial inflation hedge. Based on our outlook for rental growth and dividends, we believe real estate equities are priced to deliver reasonably attractive long-run returns compared to DM government bonds.</p> <p><b>Risks to consider:</b> Real estate equities focused on retail property are susceptible to the pressures of e-commerce and changing shopping habits, although this is partly offset by strong demand for logistics buildings. A serious escalation in global trade disputes could harm occupier demand generally, particularly for countries heavily reliant on exports. Unexpected rises in interest rates could adversely affect prices in the short term. Brexit continues to cast a shadow on the UK, particularly in relation to Central London offices.</p>

Sources: Bloomberg, HSBC Global Asset Management. Data as at close of business 28 September 2018.

Past performance is not an indication of future returns.

## Within EM equities, Asia remains a positive story

### Markets: Global stocks rose despite escalating US-China trade tensions; Indian assets underperformed

- ◆ **Global equity markets** edged up in September, with investors broadly shrugging off an escalation in trade tensions between the US and China. In DM, Japanese stocks outperformed, boosted by a weaker yen against the US dollar (supporting exporter shares). Within EM, most countries saw gains, although Indian stocks fell amid higher oil prices
- ◆ In **currency markets**, the Indian rupee fell against the US dollar over the month. Most other major EM currencies rose, however
- ◆ Meanwhile, **US Treasuries** declined (yields rose) on the back of strong US economic data and rising wage growth. Stronger risk appetite and fresh supply also weighed on the market. Core European bonds also fell over the month
- ◆ Finally, **crude oil prices** rose further in September as OPEC and allied producers confirmed they would not ramp up output in response to supply disruptions in other producing countries

### US: Business as usual for the Fed, Trump proceeded with tariffs against China

- ◆ The Fed raised interest rates by 25bp in September. Monetary policy is no longer described as "accommodative", but Fed Chair Powell stressed that the language change bears little on the future pace of rate hikes. As before, this remains data dependent
- ◆ Non-farm payrolls rose 204k in August, but more importantly, wage growth rose to 2.9% yoy, a cyclical high. With the US labour market continuing to tighten and economic growth outperforming, there remains upside risks to US inflation accelerating
- ◆ Meanwhile, although August core CPI inflation came in at 2.2% yoy, below consensus expectations of 2.4% yoy, there was a large drag from volatile apparel prices. In a separate report, core PCE inflation rose 2.0% in August, in line with expectations
- ◆ The US pushed ahead with previously threatened tariffs on imports from China, worth USD200bn. The tariff will be initially set at 10% (beginning on 24 September) and raised to 25% in 2019 if a new trading relationship cannot be negotiated

### Europe: Eurozone and UK GDP growth holding up well, but downside risks remain

- ◆ In the **eurozone**, the final estimate of Q2 GDP growth was confirmed at 0.4% qoq, with a strong contribution from fixed investment, but household consumption was slightly weaker amid higher inflation, whilst there was a further drag from net trade
- ◆ Eurozone export growth remains vulnerable to a weaker global environment, risks from protectionism and the lagged impact of euro strength. Recent weakness in German capital goods orders is also a possible early sign of weaker fixed investment growth
- ◆ In the **UK**, recent activity data has held up fairly well, including a rebound in August retail sales and strong July GDP print. Nevertheless, Brexit negotiations remain a significant source of uncertainty for the economy and monetary policy going forward

### Asia: China policy easing in place to limit downside growth risks; India takes measures to curb its current account deficit

- ◆ In **China**, downside risks to growth from an escalation of trade tensions with the US has seen policy easing with a focus now on local government infrastructure spending, tax and tariff cuts and initiatives to stimulate consumption

Sources: Bloomberg, HSBC Global Asset Management. Data as at close of business 28 September 2018.

Past performance is not an indication of future returns.

- ◆ **India** has taken measures to curb its current account deficit and attract capital inflows amid rising macro stability/external financing concerns. We think any option to support the rupee will need to come from tighter monetary/fiscal policies
- ◆ **Japan's** economic activity remains supported by a robust labour market and rising wage growth, whilst investment is being supported by limited spare capacity. The largest downside risks include protectionism and next year's consumption tax hike

**Other EM: Tentative signs of stabilisation in EM ex-China economic activity, IMF increased bailout package to Argentina**

- ◆ Our latest Nowcast shows a stabilisation in underlying activity in EM ex-China. We currently measure economic activity of 3.7% in Q3, slightly above 3.6% in Q2
- ◆ The IMF agreed to increase the bailout package to **Argentina** by USD7.1bn to USD57bn. This has helped stabilised investor confidence, following the resignation of Argentina's central bank governor, Luis Caputo
- ◆ In **Turkey**, the central bank raised the one-week repo rate by 625bp to 24%, against expectations of a smaller hike to 21.00%. This has partly contributed to a strong performance of the lira in September

The contents of this document may not be reproduced or further distributed to any person or entity, whether in whole or in part, for any purpose. All non-authorized reproduction or use of this document will be the responsibility of the user and may lead to legal proceedings. The material contained in this document is for general information purposes only and does not constitute advice or a recommendation to buy or sell investments. Some of the statements contained in this document may be considered forward looking statements which provide current expectations or forecasts of future events. Such forward looking statements are not guarantees of future performance or events and involve risks and uncertainties. Actual results may differ materially from those described in such forward-looking statements as a result of various factors. We do not undertake any obligation to update the forward-looking statements contained herein, or to update the reasons why actual results could differ from those projected in the forward-looking statements. This document has no contractual value and is not by any means intended as a solicitation, nor a recommendation for the purchase or sale of any financial instrument in any jurisdiction in which such an offer is not lawful. The views and opinions expressed herein are those of HSBC Global Asset Management Global Investment Strategy Unit and HSBC Securities (USA) Inc. at the time of preparation, and are subject to change at any time. These views may not necessarily indicate current portfolios' composition. Individual portfolios managed by HSBC Global Asset Management primarily reflect individual clients' objectives, risk preferences, time horizon, and market liquidity.

The value of investments and the income from them can go down as well as up and investors may not get back the amount originally invested. Past performance contained in this document is not a reliable indicator of future performance while any forecasts, projections and simulations contained herein should not be relied upon as an indication of future results. Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up. Investments in emerging markets are by their nature higher risk and potentially more volatile than those inherent in some established markets. Economies in Emerging Markets generally are heavily dependent upon international trade and, accordingly, have been and may continue to be affected adversely by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. These economies also have been and may continue to be affected adversely by economic conditions in the countries in which they trade. Mutual fund investments are subject to market risks, read all related documents carefully. **Please consider the investment objectives, risks, charges and expenses carefully before investing. The prospectus, which contains this and other information, can be obtained by calling an HSBC Securities (USA) Inc. Financial Advisor or call 888-525-5757. Read it carefully before you invest.**
